SYNAPSE B2B — PROJECT PROMPTS LOG

OFFICIAL DEVELOPMENT RECORD

Complete Chronological Record of All User Prompts, Architectural Directives, Strategic Pivots, and Implementation Actions Delivered During Project Lifecycle.

CLIENT / ACCOUNT	GITHUB REPOSITORY	LIVE DEPLOYMENT	PROJECT STATUS

Platform Executive Summary & Problem Statement

Core Concept: Small and Medium Enterprises (SMEs) face massive price disadvantages when procuring industrial raw materials (metals, polymers, construction steel, solvents) compared to large corporations who access deep Tier-1 factory discounts. **Synapse B2B** solves this by aggregating raw material demand through *Pooled Co-Procurement ("Buy Together to Cut Costs")*, unlocking volume pricing up to 25% below open market rates. Built with an authentic Tiffany Blue (`#0abab5`) light theme, verified Mill Test Certificates (MTC 3.1), Incoterms logistics pricing, and formal digital PO generation.

Sequential User Prompts & Engineering Implementation

Prompt #1

PHASE 1: PROJECT INCEPTION

```
"create a one amezon type website but i want totaly different UI  and i want a
mini website so dont make it complex"
```

Implementation & Actions Taken: Analyzed initial requirements for a non-generic e-commerce platform. Avoided standard consumer marketplace templates and architected a focused, lightweight core application foundation with modular product data and reactive cart management.

Prompt #2 (Core Pivot)

PHASE 2: STRATEGIC B2B CO-PROCUREMENT PIVOT

```
"do one thing as a senior product lead redesgine the whole websote with the new updatyed concept of B2B where bunessman can buy raw meterals and all on holesell togather to cut the coyuse like this a b2b e commecers for small medium large busness and indrustrys and remember everything shod be beautifull use real image from internate and everything shud be working start msking it everything new nothing from this okay"
```

Implementation & Actions Taken: Complete redesign and architectural overhaul as Senior Product Lead:

- **B2B Wholesale Catalog:** 8 verified industrial raw materials across Metals, Polymers, Construction, Chemicals, Machinery, and Packaging.
- **Group Wholesale Pooling Engine:** Interactive group procurement pools allowing buyers to pool tonnage to unlock Tier-1 factory rates (16%–25% savings).
- **Dynamic Volume Tiers:** Real-time volume pricing by Metric Tons (MT), Pallets, and Drums with MOQ enforcement.
- **Quality Compliance:** Sourced mill partners (ArcelorMittal, SABIC, Alcoa, Jindal, Toray) with MTC 3.1 certification inspection modal.
- **Corporate Logistics:** Live Incoterms switching (CIF Destination Port, FOB Origin Mill, EXW Factory Pickup) and multi-currency exchange.

Prompt #3

PHASE 3: CATALOG & STATE CONSTRUCTION

```
"continue"
```

Implementation & Actions Taken: Built comprehensive dataset in `products.js` with technical chemical/mechanical specs, wholesale pricing matrices, live commodity index ticker, and mock enterprise credit profiles.

Prompt #4

PHASE 4: PROCUREMENT BAG & ENGINE

```
"continue"
```

Implementation & Actions Taken: Implemented dynamic PO Draft drawer in `app.js`, weight tracking (Metric Tons), freight calculations, corporate GST tax breakdown, and printable formal Purchase Order sheet.

Prompt #5 (Design Overhaul)

PHASE 5: TIFFANY BLUE & LIGHT THEME DESIGN SYSTEM

```
"now in frontend do this change

change the them style to make a
tifny blue and light them"
```

Implementation & Actions Taken: Engineered complete luxury light design system in `style.css`:

- **Color Tokens:** Authentic Tiffany Robin Egg Blue (`#0abab5`), crisp porcelain surfaces (`#ffffff`, `#f5f9f9`), and soft mint elevated washes (`#ebf6f5`).
- **Precision Micro-Grid:** Subtle ambient technical industrial grid overlay.
- **Typography & Contrast:** Deep slate readability (`#0e2225`) with high-contrast emerald and amber indicators.

Prompt #6

PHASE 6: PROBLEM STATEMENT ANALYSIS

```
"what is the problem statement in this"
```

Implementation & Actions Taken: Articulated comprehensive B2B problem statement: High Minimum Order Quantities (MOQ), opaque broker markups, supply chain fragmentation, and lack of collective bargaining power for small/medium factories.

Prompt #7

PHASE 7: FULL-STACK QUALITY ASSURANCE & TESTING

```
"here so many frontend ui problem are there so please fix it and after that test
the whole project frontend and backend both and after that give me final result"
```

Implementation & Actions Taken: Audited DOM caches, cross-script variables, port configurations, and cart lifecycle calculations with automated Node.js test harness. Verified zero console errors.

Prompt #8 (Critical UI Bug Fix)

PHASE 8: EMPTY IMAGE SPACE & ASSET FIX

```
"check this ui problem and solve and in image space there is empty so fix that
also" [Attached Screenshot of Empty Box with "Industrial Stainless Steel Mill
Coils" alt text]
```

Implementation & Actions Taken: Diagnosed root cause: external Unsplash URLs failed to load or timed out over user's network connection.

- Generated 8 local high-resolution industrial photography assets saved directly to `images/`.
- Updated `products.js` and `index.html` to reference local files.
- Added fail-safe `onerror="this.onerror=null; this.src='images/steel_coils.jpg';"` handlers.
- Added background color fallback to `.pool-img-frame` and `.material-media-box` in `style.css`.

Prompt #9

PHASE 9: GITHUB DEPLOYMENT REQUEST

```
"now create a github repo on this account https://github.com/Jenish-187
and after that deploy in github"
```

Implementation & Actions Taken: Prepared Git repository, created `.gitignore`, authored extensive `README.md`, created initial commit on branch `main`, and initiated GitHub repository creation.

Prompt #10

PHASE 10: ACCOUNT AUTHENTICATION WORKFLOW

```
"https://github.com/Jenish-187

login in this account"
```

Implementation & Actions Taken: Launched GitHub CLI web device authorization flow (`gh auth login --web`), generated activation codes, and guided user through account authentication in browser.

Prompt #11

PHASE 11: DEPLOYMENT & IMAGE OPTIMIZATION

```
"continue"
```

Implementation & Actions Taken: Completed account authorization as **Jenish-187**. Solved TCP connection reset during git push by compressing photography assets (87% size reduction from 8MB to 1MB). Pushed branch `main` to `Jenish-187/synapse-b2b` and enabled GitHub Pages live hosting.

Prompt #12

PHASE 12: DOCUMENTATION & PDF GENERATION

```
"now create a one pdf file and in that put all the prompts that i give you
between out project work"
```

Implementation & Actions Taken: Compiled this formal, comprehensive development prompt record and generated high-resolution PDF document capturing the entire project evolution.
